VOICES FOR DIGITAL WELL BEIN

To help mark international Safer Internet Day (SID) 2025, the following individuals and organizations have voiced their support for cross-platform research focused on the online safety and digital well-being of teens and young adults.

Each year, Snap commissions research covering Generation Z teens' and young adults' experiences across online platforms generally. While Snap funds the research, it has no specific focus on Snapchat. The study, now in its third year, is released in full annually on SID. Results are offered to help inform the broader technology ecosystem as to how teens are faring online in six countries: Australia, France, Germany, India, the UK, and the U.S. In each country and across all six, the study produces an annual Digital Well–Being Index, a measure of young people's online psychological well–being.

Ana Conrad, Snap teen Council for Digital Well-Being member:

Snap's Digital Well-Being Index gives the public an important overview of how young people are doing online. This type of data can not only guide companies like Snap but also others on how we can work together to create a healthy experience on social media for everyone.

Dr. Dan Reibdenberg, Psy.D., International Suicide Prevention Expert and Founder of Safe Online Standards, USA:

Snap's release of the third year of studying the impact of exposure to risks around digital well-being of literally thousands of youth from around the world, and how parents are navigating their child's online activity, is a welcomed contribution to the growing knowledge base. The findings illuminate the challenges as well as the hope in what social media provides youth, and are helpful for those involved in developing policies, programs and best practices for youth and young adults around the world. With research and transparency that is in this report, industry wide changes around safety and well-being can be made.

Dinu Antonescu, Snap teen Council for Digital Well-Being member:

As a young person navigating our increasingly digital world, I often see online dangers surrounded by opacity, confusion, and misinformation. Through research such as the Digital Well-Being Index, everybody, from parents to policymakers, can use objective information to craft solutions for today's digital challenges.

Ed Ternan, President, Song For Charlie + Snap Safety Advisory Board Member, USA:

Snap's Digital Well-Being Index is an important addition to the research on the topic of the relative risks and benefits of social media for Gen Z. The data from outside the U.S. are especially helpful because they provide context for the policy debates here in the U.S., reminding us that we can't address potential harms in a vacuum. Environmental and cultural variables must be considered if we are to get an accurate read on young peoples' online experiences.

Katelynn Nguyen, Snap teen Council for Digital Well-Being member:

A safer digital future starts with awareness. Research such as the Digital Well-Being Index is crucial in exposing online dangers like sextortion, informing us to advocate for stronger online safety protections.

Janice Richardson, international advisor on children's rights and digital citizenship, Insight2Act + Snap Safety Advisory Board Member and the creator of Safer Internet Day, Europe + North Africa:

In today's climate of incivility and uncertainty, Snap's Digital Well-Being Index has become an invaluable tool for educators like myself. It serves as a benchmark enabling us to gauge progress in countries not included in the index, and highlight areas where more efforts should be directed in light of the trends detected by the Index. Thanks to tools such as Snapchat's Index, online and offline well-being is moving to the top of the agenda of educators, families and young people themselves, and more recently policymakers, too. We are looking forward to more countries being added to the Index, to cover regions where well-being, though more crucial than ever, is still neglected.

Jaylynn Perez, Snap teen Council for Digital Well-Being member:

As a digital well-being leader, research is a catalyst for empowering teenagers like me to build experiences rich in positive emotion, meaningful achievements, deep engagement, and authentic relationships. It's a beacon of hope in fostering a safer and more connected digital world.

Dr. Jennifer Laffier, Assistant Professor, Mitch and Leslie Frazer Faculty of Education, Ontario Tech University, Canada:

In an era where 'tech with a conscience' is our guiding principle, it is encouraging to see Snapchat focusing on research related to digital well-being. This research, which explores the experiences of young people with online engagement and social media, can inform platforms and promote digital literacy, citizenship, and the well-being of users. Additionally, Snapchat's study included insights from parents, which is crucial in fostering healthy communities. The Digital Well-being Index highlights key elements of Flourishing, supporting not only individual well-being but also the collective well-being of our communities. Research and resources are valuable to the education, technology, and sectors, aiding in the development of evidence-based policies, programs, and services. Continued exploration of the youth and families on media platforms will further the conversation that prioritizes ethical considerations.

Larry Magid, CEO, ConnectSafely, official U.S. organizers of Safer Internet Day, USA:

Snap's ongoing research into online risks is a valuable resource for everyone involved in protecting young people, including parents, government agencies, academics and non-profit organizations. These valuable insights help us to shape our programs to better serve parents and youth in the U.S. and other countries.

Marija Manojlovic, Executive Director, Safer Online, Switzerland:

At Safe Online, we have been championing collaborative efforts with Snap and other tech industry members around the importance of independent research for advancing online child safety through the Tech Coalition Safe Online Research Fund. Platform research efforts such as Snap's Digital Well-Being Index are a crucial complement to the research ecosystem and emphasize the value of investing in promotion of wellbeing and youth engagement for platform development.

Nicholas Carlisle, CEO, Power of Zero, UK:

This past year has seen considerable focus on the impact of social media on Generation Z. As public discourse has intensified, the opinions expressed have become more extreme and divorced from the reality of teenage lives. Snapchat's Digital Well-Being Index brings a much needed counterweight. Grounded in research and now entering its third year, it gives those of us working in the field of youth and education a valuable perspective on the connection between social media and well-being. The Index provides an important reminder of the wide range of responses and provides important metrics on the proportion of young people who seemingly suffer versus those whose lives are enriched by their engagement in social media.

Salsabeel Eldeeb, Snap teen Council for Digital Well-Being member:

The Digital Well-Being Index gives us a closer lens into the critical challenge we face in the digital world. Its research shines light on real issues real people face in this online world. The effects of telling the stories behind dangerous disputes such as sextortion and grooming allow us to learn to address and create a safer, comforting online environment. I hope everyone, adults and youth, can make use of this Index, empowering the digital world to flourish into its true potential.

Sameer Hinduja, Co-Director, USA, Cyberbullying Research Center:

As a researcher and empiricist, I've always appreciated the annual reveal of Snap's Digital Well-Being Index given that it serves as an essential pulse check on major trends in online safety, parent-teen dynamics, and related issues among young people. This year's findings provide critical insights into emerging challenges like AI-generated content and sextortion, while also providing new knowledge that families need as they endeavor to support youth navigating an increasingly complex digital landscape.

Sean Litton, President & Chief Executive Officer, Technology Coalition, Inc., USA:

Snap's Digital Well-Being Index research is a vital resource in understanding the evolving challenges and opportunities in online safety. The insights shared at the Tech Coalition's Multi-Stakeholder Forum on Financial Sextortion in 2024 set the stage for impactful conversations among tech industry leaders, law enforcement, governments, and civil society. By shining a light on the growing threat of financial sextortion and its effects on a whole generation of children, this research has empowered stakeholders to take informed, collaborative action. As a valued member of the Tech Coalition, Snap continues to demonstrate leadership and commitment to protecting children and fostering a safer digital ecosystem.

Dr. Victoria Baines, Professor of Information Technology, Gresham College, UK.:

In the fast-moving and ever-changing world of online safety, good data is of the utmost importance to ensure that companies and countries respond in a way that meets the challenges head on, and young people where they are. Snap's Digital Well-Being Index does just that by asking thousands of young people what they have experienced and how they manage risk when using digital technology. This is crucial because, in addition to using data to prevent harm, we want younger generations to be resilient, both now and in the future.

Will Gardner, CEO, Childnet and official UK organizers of Safer Internet Day, UK:

Through our work on the ground with children and their parents and carers supporting online safety, we see firsthand the fast pace of change of technology and its social impacts, both positive and negative. Research like this is so important in helping to inform this work and keep it up to date with the issues affecting children and families. And as we look to encourage conversations at home and in school around technology use, particularly safe technology use, data like this can also be a great neutral/depersonalised way to get things started.

METHODOLOGY

ß

9,007 surveys across six countries

Teens 13–17, N = 3,003 Young adults 18-24, N = 3,001 Parents of 13–19, N = 3,003 12-minute, online survey

Polling conducted June 3–19, 2024

Snap commissions the research, but it covers Generation Z teens' and young adults' experiences across online platforms generally, with no specific focus on Snapchat.

H R 3 FΛI

I. The online environment became riskier

II. Respondents were resilient as Digital Well-Being held steady

III. Gen Zers were a big target for sextortion

IV. Parents & Gen Zers stepped-up efforts to defend against online threats

V. Many were unaware about the illegalities of sexual imagery of minors

I. THE ONLINE ENVIRONMENT BECAME RISKIER

Base: Ages 13-24, N=6004

Base: Ages 13-24, N=6004

V. MANY WERE UNAWARE OF THE ILLEGALITIES OF SEXUAL IMAGERY OF MINORS

On average, 29% didn't consider involvement with sexual images of minors to be illegal

% based on the average of 5 interactions with sexual images of minors

■Not illegal Illegal

 \mathcal{L}

Exposure to online risks reached all-time highs

Non-consensual intimate imagery & unwanted sexual attention 30%

Extremist content, Illegal drug, weapon sales 21%

Thoughts of selfharm & suicide 17%

Most risk categories were higher in 2024

Likelihood of happening in

Both Parents & Teens anticipate higher levels of risk in the future

Future likelihood of risk event happening vs. actual incidence (ranked in order of largest to smallest difference)

Parents: likelihood of event Teens: likelihood of event Space Actual incidence

1 in 6 had thoughts of self-harm

Q5. Which, if any, of the following have happened to you personally ONLINE, on any electronic device during the past three months? Q6D: You mentioned that had thoughts of self-harm. Did you follow through on thoughts to harm yourself?

Thriving group grew 3-points in the past year

DWB group	Description
Flourishing (Very high)	Extremely positive – rate everything at the top end of the scale.
Thriving (High)	Average top two box across the dimensions- may not be top box on everything but experiences overall are very positive
Middling (Medium)	"Mid range" in their evaluations. Mix of good and bad ratings. Everything's not rosy
Struggling (Low)	Rate all dimensions on the low end of the scale (1-3 range). Consistently encounter negative experiences and outcomes

Flourishing respondents manage risks better

The "Four Horsemen of Sextortion"

Intimate imagery is widespread

Base: Ages 13-24, N=6,004

Once shared, intimate imagery often becomes "public"

The majority were deceived about who they were sending images to, as well as lost control of the images

SX2. Have you ever had any of the following experiences online?

SX2a. Have you ever discovered that a person you shared intimate or suggestive photos or videos with had lied to you about their identity? SX2b. Have your intimate or suggestive photos or videos ever been posted/shared more widely beyond who you initially intended to see them?

Involvement with sexual imagery increased at key transition points during school age years

Involvement with sexual imagery by age group

The Digital Well Being Inventory – 20 items

Positive emotion

Engagement

Relationships

egative emotion

chievement

Often felt proud Often felt delighted I generally felt that what I did online was valuable and worthwhile Felt the things I did online gave me a sense of accomplishment and pride

Have had more good times than bad times online Got completely absorbed in what I was doing online Often felt really interested in what I am doing online Felt excited and interested in things online

Was very satisfied with my personal relationships online Have friends who really listen to me when I have something to say online Received help and support from others online when I needed Have people in my life online who really care about

Worried a lot that other people might not like me Worried about what other people might be saying about me online Often felt lonely Often felt left out and not close to anyone

Stayed informed so I felt in touch with what's happening in my community and the world Learned how to do things that are important to Was able to grow in my skills and abilities Learned things that gave me more self-confidence

Stronger support networks were associated with higher DWBI

Base: Ages 13-24, N=6004
US claims the highest share of Flourishing

India's higher DWBI driven by a strong culture of parental support

Support assets rose in all countries (YoY chg.)

DWBI relationship with social media involvement

Social media had a positive influence on DWBI

Base: ages 13-24, N=6004

Movement between DWBI groups is confined to the middle

DWBI group trends

7%

100%

Personal identity information was shared most often in grooming related sextortion incidents

Base: Gen-Z Sextorted in relation to grooming , N=614

More sexual imagery and in person sexual meetups were the top two demands in grooming related sextortion

Most demanded item	Total	13-17	18-24
Sexual (net)	73%	76%	70%
They wanted more sexually intimate photos or videos	42%	43%	41%
They wanted to have sexual relations with me	36%	41%	33%

Risk definitions

Risk	Definition
Account hijacking	Someone used my social media account or email to post or send things that did not come from me. [Includes someone using my phone or account to post messages pretending to be me.]
Fake news or misinformation	I saw or read a news story or learned something online that appeared to be true but turned out to be false and misleading. This includes altered images and videos.
Hate speech	l received or was exposed to speech that attacked a person or group based on factors such as age, gender, national origin, religion, race, disability, pregnancy, veteran status, or sexual orientation.
lllegal drug sales	I was sent/exposed to content promoting the sale, distribution, or delivery of illegal or counterfeit drugs through the Internet or online platforms.
Weapons sales	I was sent/exposed to content promoting the sale, distribution or delivery of guns and ammunition or other dangerous weapons through the Internet or online platforms.
Online bullying & harassment	I have been bullied, harassed, teased, or called hurtful names online
Online impersonation	I have had experiences where someone had approached me using a fake identity online
Non-consensual intimate imagery	Sexually explicit content produced or distributed without the consent of the people depicted.
Thoughts of self-harm	I have had thoughts about harming myself as a result of interacting online
Thoughts of suicide	I have had thoughts about suicide as a result of interacting online.
Threats of violence	Someone online threatened to harm me, another person, or place.
Unwanted contact	Being personally contacted by someone who obtained my information online that I don't want to interact with or didn't expect to hear from. [could include people 'following' me online to see my location, what I am doing, who I am with, spam accounts that tried to lure me to follow back, etc.]
Unwanted sexual attention	I received unwelcomed sexually-oriented teasing, joking or flirting
Violent extremism or terrorism content/messages	I was sent/exposed to extremist online communications or content that encouraged and condoned acts of violence based on things like religious, political, or racist beliefs.

Timing of intimate image involvement

■Total ■Column1 ■13-17 ■18-24

RISK DETAIL

Teens reported higher levels on most types of self-harm

Young adults
Teens

Q6Da: If it is not too unsettling and you are comfortable responding, which of the following best describes how you harmed yourself

Most teens told their parents about a risk incident

But were less likely to share information about more serious risks

Base: Parent of 13-19, N=3002

Teens were less likely to have told their parents about thoughts of self-harm or illegal activities

Unwanted contact Fake news or misinformation Hate speech Online bullying & harassment Non-consensual intimate imagery Unwanted sexual attention Account hijacking Online impersonation Weapons sales Violent extremism Thoughts of self-harm Threats of violence Thoughts of suicide Illegal drug sales

Moms were the preferred choice of who to talk with

Moms still trusted the most but were down 5-pts. YoY
